**From the Publisher:** Sad news to pass along that longtime NRC member Ron Schiller passed away in Coeur d'Alene, Idaho on September 23 at the age of 79. Ron had been an NRC member for more than 50 years, and in recent years he has compiled the "From the Archives" column in *DX News*. Our condolences to his family and DX friends.

We have a very full issue this time, and are holding a large DX Toolbox column as well as the GYDXA listings for 1490 kHz. We are back to the biweekly schedule, and you can find the full schedule for Volume 86 on page 30.

Please note that I will be traveling on the weekend for the publication of our next issue (#3) and so I may be a bit delayed in acknowledging submissions and in getting *DX News* out. Your patience is appreciated!

**Publications:** The 8th Edition of the NRC *Antenna Pattern Book* is now available! See page 34 for full details. Together with the 39th Edition

of the NRC *AM Radio Log*, these are your essential tools for DXing North American AM radio stations. Order your copies today!

And don't forget that you can keep your *Log* and *Pattern Book* up to date by following the "AM Switch" column here in *DX News*. Look for an "Interim AM Switch" each weekend that *DX News* is not published, available on e-DXN.com, with all the FCC changes and *Log* updates that have become available since the last update.

## NRC AM Radio Log 39th Edition Is Now Available

The National Radio Club, the world's oldest and largest Broadcast Band DX Club, is proud to announce the publication of the 39th edition of the *AM Radio Log*. The *AM Radio Log* is a source for information on AM radio stations in the United States and Canada. The 39th edition of the *Log* contains 302 pages of data and cross references and 12 pages of instructions in 8-1/2" x 11" size, 3-hole punched, U.S. loose leaf format. This publication fits nicely into a 1" three-ring binder. 10,000+ updates since last year's 38th Edition of the *Log*! New for this year is a cross reference by State/Provinces in frequency order. This list is ideal for targeting needed areas. Additional reference lists include call letters of FM simulcasts with the AM Stations listing, listings of regional groups of stations in the groups section (separate section of the *Log*), a cross reference of those stations that are licensed to use IBOC (In Band On Channel) digital audio, and a comprehensive list of FM translators that are now simulcasting with AM broadcasters.

## TIS and OTHER

- 1610 WQKR325** CA San Marcos – 9/23 1835 – City of San Marcos TIS getting out well with tape loop by female announcer containing typical city information. New, for CA #351, station #1441. (TRH-CA)
- 1660 WQYH313** CA Escondido / Vista – 9/23 1830 – The three CalTrans stations for the CA-78 corridor in Oceanside, Vista, and Escondido, which used to be on 530 under the call signs WNRS426/427/428, moved to 1660 a few years ago. The CalTrans staff, who manage the HAR stations across Southern California, are absolutely hopeless when it comes to IDing their stations (and they have been for over 20 years!). Of the two stations logged this week, the Escondido station mis-IDs as "WNRS427, WNRS428 and WNSB426," and the Vista station mis-IDs as "WNSB426, WNSB427 and WNSB428," each of which is a bizarre mix of the old callsigns of these three stations and the callsign of the station on 1620 kHz at the San Ysidro border crossing over 40 miles to the south (WNSB415). Short and fairly useless message advising motorists to go to a website or dial 511 for traffic conditions. New, CA #352/353, stations #1442/1443. (TRH-CA)

[Editor's Note: I received many emails concerning the National EAS Test on October 3 (both on the radio and as a text message, as I did). None of these were considered DX, so they are not mentioned here. But, Thanks for sending them, as it proves the system works. If anyone heard the test in a truly DX situation, send them along.]

## DX LOGGINGS

- 620 KMNS** IA Sioux City – 10/4 2040-2042 – Good-to-fair, O/U local 610 KCPS splatter, with 'Football Game of the Week'. Faded quickly. Rare. They run 1 kW at night, but with one of their lobes aimed right at us. (JEL-MO)
- 660 WBHR** MN Sauk Rapids – 10/4 2045-2100 – Good-to-fair, with really long interview with local football player, then into ads, legal ID. Don't know whether they were on day or night power. Days they run 10 kW with a broad lobe toward the NE. Nights they run 1 kW with a broad peanut shaped pattern toward the West, but that means they do send a decent amount in our direction. Checked WCCO-830 and they were coming in like a local. Rare. (JEL-MO)

- 690 KFXN MN Minneapolis – 10/3 1520 – Fair, with woman singing a capella in Hmong language. Their 500-watt day power does a decent job of getting out to the southwest of the Twin Cities. (RD-IA)
- 700 KHSE TX Wylie – 10/4 0732 – Fair @ 20/9, with SS music, ID for KHSE & FM translator, # to call. (JJR-WI)
- 720 KFIR OR Sweet Home – 9/22 0020 – Level with KDWN with the last few minutes of the Bi-Mart high school football game of the week (Newport Cubs at Philomath Warriors). Surely running 10 kW day rig. Relog. (TRH-CA)
- 730 KEZX OR Medford – 9/13 0859 – Pre-recorded ID by female announcer: "Your home for Portland Trailblazers basketball, Fox Sports radio 7-30 AM KEZX Medford." Relog, but fairly rare here. (TRH-CA)
- 780 WBBM IL Chicago – 10/2 1514 – Weak, but readable under WJAG, with ". . . Newsradio 780 and 105.9 . . ." heard at the end of weather forecast, then into sports update. In a twist of irony, WJAG-780's translator is also on 105.9. (RD-IA) [Editor's note: As most of you are probably aware, WBBM is moving its transmitter approximately 4.5 miles SSW to be diplexed into the tower of sister WSCR-670. As WSCR's tower is taller, WBBM is forced to reduce their power to become U1 35000/42000 in order to satisfy FCC interference protection requirements toward other co-channel and adjacent channel stations.]

### UNID

- 580 UNID – 10/3 0738 – Poor, with SS by two women over anything. Music, then lost. Not in earlier. (JJR-WI) [Only SS on 580 in the AM Log is KSAZ-AZ. But that doesn't rule out KJMJ-LA (REL) who could have been cheating Mister Sun-up – Ed.]
- 830 UNID - 10/3 0710 – Poor-Fair, with SS, easily giving WCCO problems. Gone in minutes. (JJR-WI) [My guess . . . WFNO-LA pushing the button on their daytime transmitter an hour early. And that day pattern DOES push quite a bit of power your way (unashamed plug for new Pattern Book, hi – Ed.)

At long last, here is a write-up of the Rockworks 2015 highlights. Receiver: Perseus. Antenna: 18 x 18 corner fed loop. I spent a bit of time listening to the channels that end on 0 such as 630, 720 and 1260 and found a few new ones. Other bright spots were 999 *Access Manawa* and 1503 *Kool N Deadly*. The 2014 Rockworks total for New Zealand was re-analyzed and inched up to 90 stations. Fifteen more were heard in 2015, so 105 is the running total.

Here is National Football League (NFL) flagship information for the 2018 season via Internet searches. Some of the network lists are undated, so I do not know if they are for the current season. And I cannot rely on the copyright date at the bottom of each page, as that is probably added globally for the web site. even if the specific web page being viewed has not changed. And some team sites do not list the announcer team, while others have bios that are a few seasons' old, so I do not know if they are current.

Some of the online lists cannot be cut-and-pasted, as they are graphical images. One could create a JPEG image file and then feed it through an OCR scanner, but I find it simpler to hand-compare it to the text file I have saved from last season and create a new text file.

Due to NFL Restrictions, online streaming of games is prohibited by affiliates. You can listen and/or watch games online via NFL.com .

The announcer names are found at this URL:

[http://en.wikipedia.org/wiki/List\\_of\\_current\\_NFL\\_broadcasters](http://en.wikipedia.org/wiki/List_of_current_NFL_broadcasters)

That page seems to have been updated for the 2018 season, but the footnotes on that site point to web page retrievals in 2012.

I cannot include a network in this column if there is a "Do Not Reproduce" warning on the web page. This year more teams did not have their lists on the "team.nfl.com" web site, so I found them on other sites that did not have a "Do Not Reproduce" statement.

There is a site <http://nflfootballtv.com/onlineradio.html> that has Internet online radio – streaming audio and video information on each team. I have no idea if that web site is current.

The Westwood One Radio Network (renamed to Dial Global Sports and in 2013 and then renamed to WestwoodOne Sports) will broadcast NFL games; this URL

<http://westwoodonesports.com/football-announcers/>

has the list of announcers. The URL

<http://westwoodonesports.com/stations/il/2018-nfl-on-westwood-one-sports/>

has a map where one can click on a state and find the stations in that state that carry the Westwood One broadcasts. I did make 50 clicks and copied the station lists (there is no DC link to click). Here are the announcer teams:

Monday night: Kevin Harlan, Kurt Warner, Jim Gray (studio host)

Sunday night: Kevin Kugler, Jason Taylor or Mike Mayock, Scott Graham

Thursday night: Ian Eagle, Tony Boswelli

Sideline reporters: Ed Werder, Hub Arkush, Laura Okmin, Ross Tucker, Scott Kaplan, Steve Tasker, Tony Boselli

As always, any of these network lists can change during the season.

As this column was sent before the issue deadline, David Yocis checked each call and frequency against the FCC database. Many of the online lists have "slogan" call letters, not the real call letters, and I do not have the time to check every station listing in every network list.

Please send me any additions and/or corrections. Thanks.

# Musings of the Members

## Rod O'Connor – Southwest Harbor, ME – [rjoc04679@msn.com](mailto:rjoc04679@msn.com)

Greetings from the DownEast coast of Maine. I just recently renewed my membership for my 40th year in NRC ... as things in radio has changed so much, I haven't been as active a DXer as in the past, especially when I was stationed in Alaska, but now that I am back on the coast of Maine, DXing has dropped off. One of the main reasons is electrical and other interference which trashes the AM band. I especially notice how AM reception has been ruined with overhead power lines, cable TV and Wi-Fi internet interference. Still, I have my old GE SuperRadio III which works reasonably well. My original SuperRadio 1 which I bought when stationed in Hawaii lasted over 15 years, from my base on Sand Island, Honolulu in early 80s it picked up stations all across the Pacific. When I got transferred to Kodiak Island in 1984 it literally picked up every AM station in Alaska from Ketchikan to Barrow and out to the Aleutians. My greatest catch there was in June 1984 when I picked up WBZ-1030 Boston. Of course now WBZ is a powerhouse local, just 175 miles straight across the ocean from its Hull MA transmitter. Here on the coast of Maine, away from electrical interference AM reception can be quite interesting. Numerous Boston and New York AM stations can be heard; with WCBS-880 and WFAN-660 are regulars. If you are travelling to Maine, I suggest some of the shorefront parking areas on Mount Desert Island, and Schoodic Point at Winter Harbor are prime locations. Despite AM Radios decline, I find there are still many good AM Stations still left, and DX conditions can still yield interesting results. Patience is the key. Until next time good DX to all.

## 1400 kHz

WGHC GA Clayton	Steve Francis	Alcoa, TN	72
WHCC NC Waynesville	Steve Francis	Alcoa, TN	60

Thanks to Steve Francis and Shawn Axelrod for submitting information for this month's column.

In addition to the 2 new records published above, I've received 4 potential records for receptions under 60 miles, which raises an issue: Sometime in the last few years, a rule was introduced that only receptions over 60 miles would be accepted (the idea being that a GYDX record should be both "GY" and "DX"), and almost all of the records under 60 miles were removed from the lists at that time. I'd like to understand what our current and past contributors think about this. "Shall we keep or remove the 60-mile rule?", (he said, fearing a 50-50 split in the responses). If we remove the rule, we should reinstate the deleted records before we start awarding new ones. I'm open to doing that. Please send me your comments this month, and I'll summarize the results in the next column.

Guidelines for submitting GYDX records (not much has changed, just a few minor notes):

- Tell me the city (or description, if you were listening from a remote area outside of town) and the exact latitude/longitude of your DX location. (For an easy way to get your latitude/longitude, just enter your address into Google, click on the Google map, then click inside the map at the exact location you were DXing. The latitude and longitude appear in the revised URL after you click on your DX location.)
- Please try to verify that the catch is a record. Web sites such as <http://topazdesigns.com/ambc/> make it easy to calculate the distance from your latitude/longitude to any current US or Canadian station.
- Of course, include the call sign (at the time of your reception), frequency, city/state of the station.
- We still have a policy in place to provide some documentation of the reception, e.g., a logging, a recording, or a verification. (If your logging has recently appeared in DXN, just let me know; there's no need to resend the details to me.)

A few people have raised another interesting question: How shall we handle cases where you used to hold a record for a given station, then another DXer beat that record, but the record was later vacated for some reason, and your old logging would beat the record (if any) listed for that station today... i.e., how do you go about reclaiming an old record, when it might be difficult to dig up your old log of that station from 20 or 30 years ago? Here's an idea: We have decades' worth of old DXNs on file on the e-DXN web site. If you can direct me to the DXN issue that contains your past record (either the GYDXA column showing the record, or the DDXD/IDXD column showing the logging... a GYDXA column will probably be a lot easier to find!), then I'll reinstate the record on the merits of its prior publication. It makes sense to honor the decisions of the past editors, and this will streamline the process (and hopefully get a few more people to review their old records and jump back into the GYDX arena). This month's record for WGHC-1400 was actually the result of this process (since the station no longer exists, I couldn't calculate the distance myself, and needed to consult the old GYDXA column).

Our next column will include a GYDX totals update. If you want to decompose your totals from multiple locations back into separate totals for each DX location, now is the time to let me know. Hopefully your totals do not include call changes, but if they do, please let me know, so we can make a note of it.

See you in a month or so, after this year's Border Inn DXpedition. I'm trying to hear 200 GY stations from a single location for the first time in my life (last year's trip took me from 180 to 193). After 2 years of very heavy auroras, some non-auroral conditions would sure help me with all the northern stations I still need. – 73 Tim

## From the *DX News* archives ....

**75 Years Ago** – From the October 16, 1943 issue of *DX News*: TGW-640 in Guatemala City was heard by Ray Edge in Buffalo NY and Dick Cooper in Kittanning PA at its sign-off at 1:15 a.m. EWT (Eastern War Time). Bill Gabriel, Jr. sent a list of call letters assigned to FM stations, which previously had only used experimental callsigns (e.g., W67NY New York will now be WABC-FM). Jim Wedewer has stepped down as editor of the shortwave column.

**50 Years Ago** – From the October 19, 1968 issue of *DX News*: The “Boston Emergency Publishing Committee” has taken over the publication of *DX News* from John Callarman, following the successful convention in Boston. There was much discussion of a possible merger between the NRC and the IRCA, and a 10-member committee from both clubs was considering various options. Wayne Heinen (Aurora NY) reported several verifications, including KNX-1070 and 4VEH-1035. TGJ-880 in Guatemala was reported from coast to coast by Fr. Jack Pezja in California and Marc DeLorenzo in Massachusetts, while LR-1 Argentina on 1070 was logged for the first time by Gordon Nelson, also in Massachusetts.

**25 Years Ago** – From the October 18, 1993 issue of *DX News*: Barry Finkel published a list of NFL flagship stations and numbers of network affiliates. Barry Wayslik, along with David McBride and George McLachlan, heard both TAs and TPs at their DXPedition in Lewis, MB, including Tahiti-738, Australia-702, 738, 774, and 828, Egypt-1107, and Germany-1539. The Arctic Radio Club reported many MW stations in Europe going dark or severely reducing schedules, including in Austria, Estonia, Germany, Kaliningrad, Switzerland, and Ukraine. Steve Francis in Alcoa TN reported that he had logged his 10th station on 890 (Cuba), 830 (R. Paradise), and 880 (KHAC), leaving only 650 and 700 kHz as channels with fewer than 10 stations logged.

**10 Years Ago** – From the October 13, 2008 issue of *DX News*: Richard Allen of Billings OK sent loggings to IDXD for the first time in two decades, using his ultralight Sony SRF-T615 barefoot, with his loggings including Japan-774. Giampero Bernardini reported loggings from La Spezia, Italy, including WQBA-1140, R. Martí-1180, WLIB-1190, WRCA-1330, WDEA-1370, WEGP-1390, WFED-1500, WDCD-1540, WCNZ-1660, WOKB-1680, and WJCC-1700. Kevin Schanilec contributed a lengthy article on DXing techniques using passive loop antennas, including positioning of the antenna and receiver to enhance selectivity, notch adjacent channels and IBOC noise, and more.

## NOAA Space Weather Outlook

Issued October 1, 2018 – For the period October 1-27, 2018

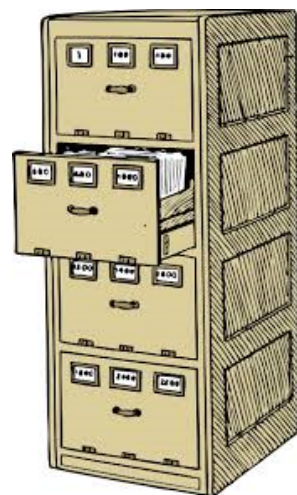

<http://www.swpc.noaa.gov/products/weekly-highlights-and-27-day-forecast>

Solar activity is expected to be at very low levels throughout the outlook period, with a slight chance for C-class flare activity.

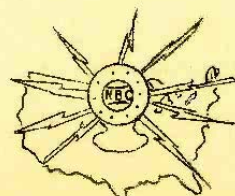

No proton events are expected at geosynchronous orbit.

The greater than 2 MeV electron flux at geosynchronous orbit is expected to be at moderate levels from 1 - 8 Oct, and again from 26-27 Oct. High levels are expected from 9-25 Oct following elevated solar wind speeds associated to recurrent CH HSS activity.

Geomagnetic field activity is expected to be at quiet to unsettled levels from 1-6 Oct, with isolated active levels likely on 1 Oct. Conditions are then expected to reach G1 (Minor) storm levels on 7-8 Oct, with G2 (Moderate) storm levels likely on 8 Oct, due to a positive polarity CH HSS. A brief return to unsettled levels is likely on 9 Oct, with G1 (Minor) storm levels likely returning on 10 Oct as CH HSS effects persist. Active levels are expected on 11 Oct as CH HSS effects taper off. Mostly quiet to unsettled levels are expected from 12 - 18 Oct, with isolated active periods likely on 14 and 18 Oct. G1 levels are likely again on 19 Oct as another CH HSS influences the magnetic field. Isolated active periods are expected early on 20 Oct before conditions decrease to be at mostly unsettled levels throughout the remainder of the outlook period (21-27 Oct) as CH HSS effects continue to wane.

## NRC Antenna Pattern Book 8th Edition Is Now Available

The lists of U.S. and Canadian stations are those licensed by the US Federal Communications Commission and Canada's Industry Canada, and coincides with those appearing in the 39th Edition of the National Radio Club's AM Radio Log. Many stations have a Construction Permit (CP) for changes to their facilities. It is assumed that these changes will eventually be employed, so are depicted as such. Additionally, several Mexican stations located adjacent to, and near, the United States border are included, as well as stations on 810, 1240 and 1540 in Nassau, Bahamas.

Naturally, a non-directional signal travels as far as possible, depending upon the transmitter's output power through a single tower. Directional patterns are used to avoid interference to other stations on the same or adjacent frequencies, and may require as many as twelve towers to achieve this. Pattern plots in this book are reproductions of those shown by the FCC, and backed up by those generated by a computer program written by NRC member Neil Adams. Each illustration closely reproduces the pattern's shape and bearing. However, the size does not reflect the actual coverage areas due to many variables: frequency; a directional pattern (if used); the electrical tower height; ground conductivity; terrain; weather; atmospheric conditions, and interference from other stations. Your ability to hear any station, of course, is based upon these factors plus your receiving equipment.

**PATTERN PLOTS:** Daytime patterns are illustrated with a dashed line; Nighttime patterns by a solid line; Critical Hours patterns are depicted by a solid line with small circles at various intervals. Many stations, mostly on 'clear channels', operate during what is referred to as 'Critical Hours'. These periods are from sunrise to sunrise plus two hours, and sunset minus two hours to sunset. This is when the ionosphere transitions from nighttime to daytime (morning), or daytime to nighttime (evening) conditions resulting in greater coverage for a station than what would be expected using their licensed daytime power. Licensed 'Daytime' operation during these periods would cause interference to co-channel and adjacent-channel stations. So, the FCC has implemented Critical Hours periods for stations who agree to operate during those periods with (normally) a power level lower than that licensed during the daytime, and in some cases utilizing a directional pattern. Currently, no Canadian or Mexican station is licensed to operate using a Critical Hours operation.

**U1 and U3:** Patterns for stations which operate with the same power day and night, designated in the AM Log as U1 (non-directional) or U3 (same pattern all hours), are depicted with a single, solid line. Many stations with the same power all hours and designated DA2 by the FCC and U4 by the NRC, but have identical parameters. Those patterns are also drawn with a single, solid line.

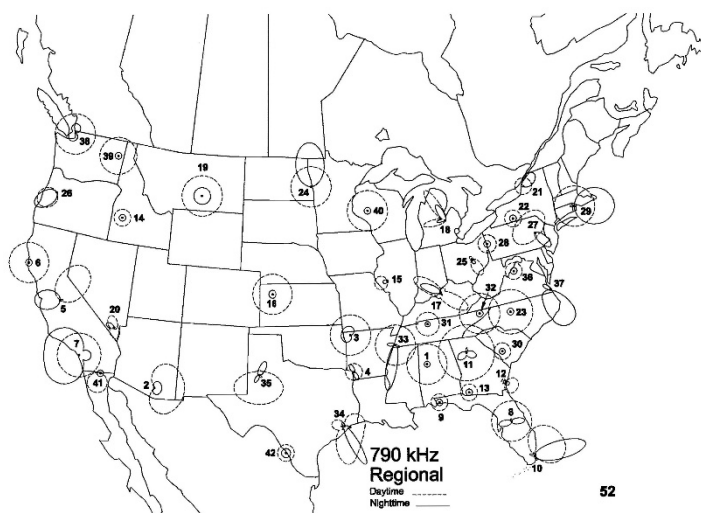

Except for four, all stations on 1230, 1240, 1340, 1400, 1450 and 1490 kHz are licensed to operate non-directional all hours, so no patterns are drawn for them. Patterns are illustrated, however, for the four using a directional signal. All non-directional signals less than 500 Watts are depicted by a small, equally-sized circle.

All stations in Alaska and Hawaii operate non-directional full time, except one. That being in Nome, Alaska on 850 kHz (directional only during Critical Hours operation; see pattern on Page 64). All stations in Alaska, Hawaii and Northwest Canada are designated on the List pages by an A, H or C, and their locations are plotted on Page 238.

Every attempt has been made to place the listed number adjacent to the corresponding dot of the city so as not to interfere with the pattern or a state/province line. Where not possible, or in the case of space restrictions, an arrow has been utilized to match the number with the location of the station.

The book is available from the National Radio Club at PO Box 473251, Aurora CO 80047-3251 and Priority Mail to addresses in the United States for \$26.95 for members and \$32.95 for nonmembers. Canadian orders are US\$40.25 and all other countries are US\$51.25 both shipped Global Priority Mail.

The Pattern book may also be ordered using pay pal from our website <http://www.nrcdxas.org> at slightly higher prices.
