20 February 1976

Dear Mr. Andrews,

Thank you for your reception report of the test broadcast, for the National Radio Club, on the 16th of February.

Your reception is correct, not only by the report received in the mail, but also during our telephone conversation, I actually did hear the code ID on your receiver when you turned the volume up.

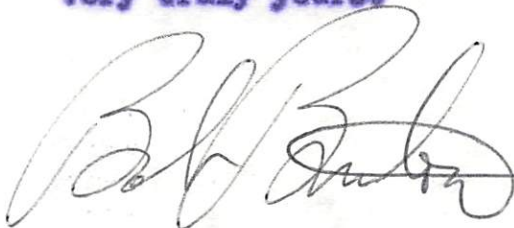

As I explained to you on the telephone, the code ID was run continuously in the background of the other programming, and was recorded on a continuous loop tape at 1-khz and at a speed of approximately 6 wpm.

Please find enclosed, a copy of our test program log.

It was a pleasure to run this test for the club, and many thanks also to Mr. Wes Boyd, of station WHOT, in Youngstown, Ohio, for his fine efforts in coordinating this test for your organization.

May I wish you the best of luck in your future listening.

Very truly yours,

Bob Bunton
