Dear Kelly:

Many thanks for your report of reception from KCRG-RADIO on February 9, 1976...I am happy to confirm your report.

I think yours is the farthest south I have answered....we receive numerous reports from the north and west; some from New England.... many from New York State, but yours is the first from anywhere south of us! Our station now operates 24 hours a day, seven days a week with 5-thousand watts non-directional daytime, directional mostly northwest at night.

I used to have the awful habit of staying up late at night to do some DX-ing of the AM broadcast band in the US, but I simply lost too much sleep, so I dropped the idea...now, with the sudden influx of DX letters here, I again am getting the "itch" to stay up again! I need to purchase a good directional antenna, though....I have a decent receiver, but the usual built-in AM antenna simply won't do the job I need it to do.

Enough rambling.....would the DX-ers need or appreciate any special programming at night from us? I can certainly arrange such a program if enough DX-ers needed or wanted it.....please advise if you have a chance!

Regards,

Rick Sellers
Program Director
