Dec. 29, 1977

FROM:

Shelby Wilkinson  
chief engineer  
WORX radio

This is to confirm reception of WORX A.M. on December 26, 1977 at 0200 hours. We were testing from 1:59am until 2:31 am, on 1,000 watts, at 1270 k.c.

We have a Collins 20v-3 a.m. transmitter, 1,000 watts daytime power, with Pre-sunrise authority of 500 watts. We have a two tower directional antenna, with each tower highth at 200 ft. We also have an RCA F.M. transmitter at 96.7, with a four bey f.m. antenna, for 3,000 watts e.r.p.

I very much appreciated hearing from all who reported our reception. Enclosed is a coverage map for you, showing our pattern, both am and fm. It is very interesting hearing of all the places we were heard. If we do conduct another test of this sort we will find a way to let all of you know.

THANKS AGAIN

*Shelby Wilkinson*
