560 ON YOUR DIAL

5000 WATTS—CBS—EST. 1939

Your reception report dated 11-10-75

is correct according to station logs.

This card will verify your reception of WJLs(AM). Thank you for your letter. We were operating most of the night with 5 KW, testing our new transmitter, a Gates MW-5, which we've just installed this month. Incidentally, I received one other QSL card request so far requesting verification of reception from a suburb of Chicago about the time you received our signal. We normally operate with 500 watts at night, using a directional antenna system consisting of two 316 ft towers. At night, we protect WIS, WFIL, and WIND. WJLs went on the air in 1939 on 1210 KHz, then a Class IV frequency, moved to 1240 KHz in 1941, and to 560 in 1944. In 1953, our power was increased to 5000 watts day and 500 watts at night. We also operate WBKW(FM) on 99.5 MHz, with transmitter at Flat Top, W. Va.
