14 Jan 1997

Dear Ernesto

This confirms your reception report of
Jan 6th 1997 between 9⁵⁸_{pm} + 11⁰⁵_{pm} PST on 1630 KHz.

The major obstacle to your reception quality might
be the indoor antenna. Have you tried using a
five hundred feet of wire out in the countryside, away
from the power lines?

We escaped the major parts of the floods
last month. But --- rainy season really starts at the
end of Jan! We will be careful.

You are listening to us at the proper
time for best reception in that direction - keep trying.

Regards
Ralph Jones
