

Date: 24th January, 1950:

Dear Sir,

Thank you very much for your reception report dated 15th inst., regarding our transmission on 1366 k/cs from here in Germany. We transmit on this frequency with a power of 15 KW originating from our station at Herford.

In addition to this we transmit on 1095 k/cs (274 metres) on the following stations and powers as shown :-

Langenberg (Ruhr)	1095 k/cs (274 metres)	20 KW
Hannover	" " ( " " )	20 KW
Pinneberg (Hamburg)	" " ( " " )	20 KW
Berlin	" " ( " " )	5 KW

It is interesting to note that yours is the third reception report we have received from State Side during the last month, and it appears that during this period, conditions in the ionosphere have been ideal for such reception. The previous two reports were from :

Mr. Hal Newell,  
103 Parkside Avenue,  
Braintree, Mass. U.S.A.      and

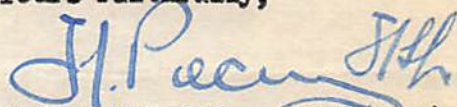

Mr. Henry Helbreek,  
6504 Chestnut Street,  
Chevy Chase 15, Maryland, U.S.A.

In each of these cases however, reception was from our 1095 k/cs transmitters.

Enclosed herewith a specimen copy of our Programme Sheet for your information, and from this you will see that our transmission times are from 0630 hours until 2400 hours Central European Time, (0100 hours on Saturday night).

We will be pleased if you would inform us if you receive our transmissions in the future.

Yours faithfully,

(F/LT. F. J. PACEY, A.M.I.E.E., A.F.R.Ae.S)
