Dear Mr. Cooper,

This will verify as correct your report of the reception of signals from this station on November 14, 1949 during an early morning Frequency Check broadcast. WDUN operates with a power of 250 watts. We check our frequency every second Monday morning 3:15 to 3:30 AM each month.

As for the report from the monitoring station of our frequency for November 14, 1949 it was Plus or minus Zero for Xtal No. 1 this Xtal we use most of the time during our operation. Xtal No. 2 we have been having some trouble with and it has been to the repair shop and was off a minus 16 cps but was brought back to zero deviation during this test broadcast.

As for our coverage at night we usually get out about 10 miles and during the daytime anywhere from 20 to 40 miles according to which direction from the station.

We operate on a regular schedule from 6:00 AM to 11:00 PM.

Thanks for the report

Sincerely,

Jackson A. Dodd
