

KXG1

Dear Sir:

Thank you for your assistance to us during our Equipment Test Period. Your report, along with the many others received, have been instrumental in determining our night-time skip areas. During our test period, February 23rd to March 14th, we received many hundreds of BCL reports, including a ZL report of R5 - S8.

We are running 500 watts to a Raytheon RA - 1000 transmitter, making as full a use of our limiter as possible. The Antenna is 170 feet high, shunt fed, and is located in a very swampy piece of ground.

This station is 100% Ex- G.I., the owners being Commercial Manager, Program Director, and Chief Engineer.

Thank you again for your report.

"73"
