Dear Sir;

Thank you for your report on reception of our station during equipment tests the morning of April 16, 1947.

I am pleased to report that your report coincides with our log.

Just a little dope on our installation here.

We have all new Raytheon equipment, with a 1,000 watt transmitter on 1210 K.C. The antenna is a 215 ft windcharger vertical-tower. The transmitter is approximately  $4\frac{1}{2}$  mile from the studios.

Your report is very helpful to us, and with the other reports from DX'ers like yourself, we can better determine the characteristics of our new installations.

Good luck on your DXing hobby.

Yours,

*Max W. Thomas*
