Dear Mr. Cooper,

I have your letter of September 21st on your report on hearing our signal squirter W M B N 250 watts, on the morning of Sept 21. For all purposes of frequency measurement, we call on a laboratory in Detroit to monitor us. True he has some trouble too with a station on his backdoor on the same frequency.

You have heard W M B N that is sure and think that verification is due. That what you did catch is correct according our logs. Then too, with 250 watts we don't claim to be able to put a good readable signal out into the area of more than 75 miles daytime and 12 miles at night.

You might try again as our schedule for frequency check is every third Wednesday of every month, at 1:30 EST A M.

That golden voice was my own voice that you heard. I am holding the post as Manager and Chief Engineer of W M B N.

So, I hope that this reply is satisfactory to verify your report, and invite you to listen again.

Yours sincerely,
R. W. Pierson
