Brooklyn 26 N.Y.

Dear Sir:

I am verry happy to say that upon checking with our program log I can use the word "REPORT VERIFIED".

Now as to the interference between W S A N and W A T S There is none that I know of in either of our primary areas. The secondary area may have some ,That I donot know and have had no complaint from their Engineer. The terrain between Allan Town and here is very rugged and hilly,so by the time our signal gets down through that area it has weakened considerable.

As to early morning frequency checks yes.

Second Friday of every month 3:45 am. to 4:00 am. E.S.T.

1000 cps note interrupted every three minutes voice announcements

I do appreciate reports on our regular broadcast schedule as it gives us a true picture of our coverage where on our freq.ckecks we have to take into consideration our sky wave and skip distance.

Very truly yours

B.A. Franklin C.E.
