

# BEAVER DAM BROADCASTING COMPANY

1430 KILOCYCLES  
BEAVER DAM, WISCONSIN

March 24, 1952

Mr. Ernest R. Cooper  
438 E. 21st St.  
Brooklyn 26, N.Y.

Dear Ernest:

Thanks for the reception report. Glad we got into the big city OK.

In case you keep any record, our transmitter is a Western Electric one-kilowatt job, our tower is Stainless and 195' high and we operate daytime only and non-directional.

Sorry the test was one day late due to my mistake in the dates. I wrote to Sidney Rosenbaum, who originally contacted me about the possibility of putting on a program, and said that most any open date was OK by me for another try. He wrote me back and suggested a couple of dates of which the better one for me is Monday April 21st at 0330-0400 E.S.T. So if it's agreeable to you guys, I'm very willing to give it another blast at that time.

I got about fifteen reception reports back on this test, and only two did not specify that they were NRC members. Their names and addresses are:

Erick R. Johnson  
1610 Mahan Ave.  
New York City 61, NY

and Hubert Montilet  
Box 274  
Elberon, N.J.

Assuming that the proposed test is OK, I wonder if you would put something in your write-up for the DX News about my being particularly interested in Western listeners. All I've ever gotten from that direction is one of your members in Omaha Nebraska. In fact, I think he is the only one west of the Mississippi river.

Thanks for your courtesy,

  
Alister S. Alexander  
Chief Engineer
