Provincetown, Mass 02657

Ernest,

This will confirm your reception of WRWA on July 10, 1986. WRWA operates with 50,000 watts effective radiated power at 88.7 MHz. WRWA serves the Dothan, Alabama area and our transmitter is located in Wicksburg, Alabama. Equipment at the site includes a Harris FM 25-K transmitter with an Electronic Research Antenna (circularly polarized) at 498'.

I apologize for being so slow in answering your report, Ernest, but late summer and early fall is the busiest time of year for us here at Troy State University. Also, I challenge you to send me a report on our third station, WTJB which serves the Columbus, Georgia area. WTJB operates at 91.7 MHz with 3000 watts ERP.

Good luck and the best of DX.
