

WBOS

29 March 1981

Dear Ernie-

Thank you for your report of reception of WBOS. All details agree with our logs, and I am pleased to verify your reception.

You may be interested to know that WBOS broadcasts with a licensed power of 10.5 kW from an antenna with height of 888 feet above average terrain, giving an effective radiated power (ERP) of 50 kW. Other stations sharing the same tower are WVBF, WJIB, and TV channels 25, 38, and 56.

Now, before this typewriter reduces me to a quivering wreck, I shall close.
