Provincetown, Ma. 02657

Dear Sir,

This is to confirm your reception of WJUL on 4-23-80. Comparing your report against our program logs and after talking with the on air person it seems as if WJUL did propagate to provincetown.

WJUL is a non-commercial station with a 1700 watt E.R.P.. Our antenna pattern is directional, with most of our signal being towards new hampshire. We have had reports of reception from near the canadian border. The thing that amazes me is that you are on the back side of our antenna. We are restricted to radiating 210 watts towards andover mass. because of a 10 watt station on the adjacent channel..

Good luck on your DX reception work. Skip season is upon us and the sunspots are giving AM skip good DX. I have recieved QSL cards from texas talking AM from the mobile on 27 mhz with 7 watts.

3's and 8's,

*John C. Sullivan, Jr.*
