Dear Ernie,

Thanks for the letter of reception. We no longer operate with ten watts we increased power to 310 watts last February and moved from 91.7 to 91.5. In the very near future our radio station will be powered by a windmill you might report this to the National Radio Club members might like a QSL from their first windmill radio station there are only a few others in this country and one solar powered station in Ohio. Thanks again for the reception report and letter. By way of comment I worked in commercial radio for over 20 years and never confirmed DX listener reports as it was of no interest or value to a harried short of time commercial operator. I realize this is a disapointmet to a DX listener but really what value is the report to a guy trying to make a living selling advertisements DOWNTOWN. Now that I am in educational radio where there is less pressure and rat race I have time to QSL so tell the gang and best of luck in Providence Town.

Sincerely

Herb Andrews

Station Manager
