Ernest:

Great to hear WXGL has broken through the BRU barrier! As you may know WXGL is a 6,000 watt class A licensed to Topsham, Maine - with a tower located in Brunswick. WCME is a 25,000 watt class B1 licensed to Boothbay Harbor and Bath Maine - with a tower located in Newcastle. WXGL is broadcasting through a one of a kind Shively antenna. The model 6824 was an alpha test antenna from Shively Labs of Bridgton, Maine it is the only internally fed antenna Shively has made.

Thank you for your DX report. It's great to know we are heard in Mass.

Sincerely,

Thomas R. Cole
Chief Engineer
Bay Communications Inc.
