Dear Sir:

Thank you very much for the report. We have been having trouble with our transmitter and antenna system and was hoping that I had made some improvement. Your report shows that I have gained a little on my problem.

Our transmitter is a Bauer model 707. Our day-time power is 1000 watts and night-time power is 250 watts. Our antenna is 205 ft shunt fed. All monitors and audio equipment are Gates. The console at the studio is transistorized. The studio is 1.3 miles west of the transmitter site.

Sincerely yours,

Mary W. McKinley WAØESZ
Engineer KBZZ
