

WJCM = 96
SEBRING

April 3rd. 1981

Dear Carl:

Thank you for your reception report and nice letter. I am pleased to enclose a QSL card to verify your reception of WJCM during our test transmission March 23rd 1981.

I can understand why you couldn't have given a more comprehensive report. WERC was a big factor in all the reports I recieved. If you know for certain that KMBZ is modulating 130% you should notify your local FCC office as the limit is 125% positive. I know how local splatter puts a pain where most DXers sit, cause I've been a DXer for over 15 years, and although AM stations must compete with a certain amount of loudness, I can't see being 20 Khz wide or more with splatter.....after all, there are laws!

Again, thank you for your report, sorry this reply is a little late, but I tried to write a little letter to all DXers who sent in reports, which put me behind a little.

 (813) 385-7140

Sunrise . . . Sunset . . . in FLORIDA, each one is a breathtaking sight with the sun over the peaceful waters in a burst of color framed by palm trees.

Card # 10

This confirms your reception of WJCM Sebring Florida, on March 23rd 1981. We were broadcasting a special test transmission on 960 Khz. , 1 Kw between 0730 and 0830 GMT.

Thank you for your report
