Overland Park, KS 66204

Dear Carl,

This is to confirm your reception of K C J J Radio on December 24, 1978 at 12:06 A.M. We are at 1560 Khz, with a nominal power of 1000 watts, and an actual power (transmitter power) of 820 watts. We use a three tower directional array daytime, and five towers (critical array) night. Enclosed please find a map roughly approximating our day and nighttime coverage.

We are located approximately three miles south of Iowa City on the Sand Road. We did not sign on until early in 1977, which would explain why you failed to find us in 1965!

Our best to you in Kansas, and Happy Hunting!

Sincerely,

Bruce Ingham
Chief Engineer, K C J J
