Ph. 432-1590

Dear Mr. Dabelstein,

This is confirmation on reception of our signal
June 11, 1963 during our frequency check.

The coverage map which you requested for the winter months would have to be computed with field strength measurements during the winter months and a map drawn from the data. As you can see this would be a lot of work for nothing since condition change every night of every month. This I imagine you have noticed in listening around the band. I have enclosed w/ our general daytime coverage. At night we are directional with two towers to the north and 1/2 our power to make it 500 watts.

Sincerely,

Robert J. Corcoran
Chief Engineer
