3-18-82

Carl, thanks for your report. I'm glad we're putting out such a signal. I took over the engineering position here Jan 4th, moving here from Springdale Ark, KC12 FM 104.9 + KQXK 1590.

During the month of Feb. I found out that the output of our CRL (current research lab) processor was wired out of phase, injecting the 125% signal into the Negative audio line + the Neg signal to the positive, it sounded real Bad.

After tuning the Collins 820D-2 (1kW) Xmitter + CRL unit we sound much better, Louder than KRMO (50kW) in most parts of the city + almost as loud as KVOO (50kW). We use a 253' self supported Tower 4mi east of town.

Since tuning up we have had several good signal reports in outskirt areas.

We now have CRL on our FM-KRAV-96.5 as of the end of Feb. you might try picking it up if you Haven't already loved it.

Ruth Osterman
