Carl Dabelstein
Lincoln, Nebraska

Dear Carl:

The information you have supplied is enough to warrant a verification. The test was conducted using a 1946 G.E. xmtr and a 200 foot NON-D antenna on an island 500 feet into the Seekonk River. (we use a boat)

As soon as we get word about a WGAR SP, we'll do another test. Hopefully without frontal systems and generally poor CX messing things up.
