Dear Carol,

Thankyou for your letter regarding your reception of our January frequency measurement test. Your letter will confirm your report. WHUB-AM conducts these tests every second wednesday morning from 12:40AM-CST to 1:01 AM-CST. We are monitored by Commercial Radio Monitoring Co out of Lees Summit Mo. During the test we operate with 1kw. Normally being a class IV we operate 1kw daytime, 250 w at night. Our transmitter is an RCA BTA-1R. Our antenna is a 180' vertical radiator, overall length 182'. Ground system consists of 120 equally spaced, buried, copper radials 180' in length, plus a 24' x 24' copper ground system. I am not the chief Engineer, our chief ~~work~~ ^{works} for several stations & a cable system in this area so he ~~does~~ ^{can} not have time to answer these reports. I do it when I find them. One again thank, and we are happy to be added to your confirmed list.

Sincerely,

David Brownell
