Dear OM:

This is to confirm your detailed reception report of KUUY on November 21, 1982, 5:01 P.M., MST. You might be interested to know at the time we were on our night time pattern, a four-tower array fed with 1 KW. During daylight hours we are non-directional with 10 KW. I know the night pattern is correct, as I have just completed a partial proof of the antenna system. Our pattern at night has major lobes north and south and nulls east and west. We have to protect WCKY in Cincinnati.

As to 660 - it has been modified to 870, and we are still waiting.

73.
