

KCEE

KWFM

Dear

Thank you for your recent reception report.

KCEE is a full time, 5,000 watt day/500 watt nighttime directional station. We use a state-of-the-art pulse duration modulation continental transmitter feeding a three tower antenna array in separate day night patterns (that are almost identical) with a cardioid pattern headed east and a null to the west.

KWFM is a full time class C operation operating with the equivalent of 100,000 watts at 2,000 feet above average terrain. (actually, 93,000 watts at 2,043 feet!). Our omnidirectional antenna is the highest antenna located on the Tucson Mountains west of Tucson.

KCEE and KWFM are owned by American Media Corporation, who also own radio stations in Patchogue, New York; Orlando, Florida; Cincinnati, Ohio; ~~El Paso, Texas~~; and the San Bernardino/Palm Springs area of California.
