

STEREO COUNTRY 97.5 FM

June 21, 1989

Carl W. Dabelstein  
9404 Santa Fe Lane  
Overland Park, KS 66212

Dear Mr. Dabelstein:

We have received your letter concerning possible reception of WAMZ on the morning of May 24.

It is unusual to receive FM stations over such distances, but when conditions are right it is certainly possible. A few years ago we had confirmed reception of WAMZ in Colorado. Amateur radio operators often make contacts over thousands of miles on VHF frequencies.

Your description of what you heard indicates that you really were hearing WAMZ. Our format is country, and we have a contest that involves giving away cash on the air.

WAMZ is the top-rated station in the Louisville market. We operate with 100 KW of power and an antenna height of 500 ft. above average terrain.

We also operate 50,000 watt clear-channel AM station WHAS, at 840 Hz. Our AM signal is heard all over the US and Canada, and we frequently receive reception reports from Europe and other distant parts of the world.

Thanks for your letter. We enjoyed hearing from you.

Best regards,

Charles R. Strickland  
Chief Engineer
