Carl:

I was the announcer on the air when you received our broadcast on July 17th. Its remarkable that our signal could skip into your area of the U-S...but I guess anything is possible.

Our engineer is currently working on another project in Colorado Springs, so I am writing to confirm your report. Our station is a 100,000 watt adult contemporary F-M, with an A-M station, 1090 KBOZ, with a country music format in the same building. Our A-M is 5,000 watts, omni-directional during the day and directional after dusk...we've had reports of our A-M signal in Norway and Finland after dark.

Enclosed is a bumper sticker and a coverage area map to compare with your data.

Sincerely,

Duane Barnhart  
KBOZ-FM, Bozeman
