Mr. Carl W. Dabelstein
1924 South 55th Street, #2
Omaha, Nebraska 68106

Dear Carl,

We at KIOS-FM are very happy to return a verification of your OS� on our station of the day of July 14, 1971. A few interesting facts about our station are the following:

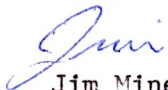

Transmitter power is 5,000 watts output.
Effective radiated power horizontally, 26,000 watts.
Effective radiated power vertically, 26,000 watts.
Longest confirmed location was Duluth, Minnesota.

I see by your signature that you are an amateur radio operator and I am very happy to see that you are diversified enough to look into broadcast station wave listening. I have noticed the last several mornings an interesting condition on my car radio which has provided me with the ability to listen to several out-of-state FM stations. I am sure you have been OS�'ing with these also. I, too, am a amateur radio operator and I spend some of my spare time on SSB on 20 meters. My call is KØUIS.

KIOS-FM is unique in that it is operated by high school students in the Omaha Public Schools. I would like to offer an invitation for you to visit the radio station at your convenience. It would be advisable, however, to call and confirm a time as I am in and out of the radio station.

Once again I thank you for your verification and I would like to meet you in person sometime.

Sincerely yours,

Jim Minear
Chief Engineer
