April 13, 1994

Dear Mr. Geary:

Thank you for your letter of March 24, 1994. You wrote the right person for a response this time.

I checked with the manager and he didn't remember receiving your letter but managers have poor memories.

I checked the log and your report verifies your reception of KINY Radio for the period Sunday morning July 18, 1993. We were operating with a power of 10KW on 800KHZ. We are 10KW Days and 5KW at night.

My wife and I take a trip to the northern part of the state every fall and pass through the Yukon. Usually when we stay at a motel and catch the KINY Skip signal into the area about 8-9 at night. It usually fades out after that.

We always make a point of staying a couple of days at Whitehorse. Its a great place for a visit.

I first started with KINY back in 1947 when the station was on 1460 KHZ. In the early 50' we moved to 800KHZ. Not quite as good for dx but better locally.

Hope to meet you on one of your trips.

Best regards

Charles M. Gray C.E. (KL7IG)
