April 26, 1953

Mr. Kermit Geary
R.F.D. # 2
Walnutport, Pa.

Dear Mr. Geary,

I wish to verify your reception reports as of April 20 th and 21 st. We have had a few reports from the eastern part of the country, But yours is the first from Pa. and you know how pleased we are to receive it. You can see we wouldn't get any from any of the western states, since the station XEW is on our frequency with their high powered station.

I would like to tell you a little about our set up here at WOZK, We use a collins 20-V 1KW transmitter with a 52 ohm transmission line working into a shunt fed tower. The tower is a stainless guyed 245 ft. job. with 120 ground radials 437 ft. long. We also have a ground screen around the tower 24x32 ft. with a 8 ft. screen under the slant wire from the tuning box to the tower.

The time of operation here at WOZK will be day time only, from local sunrise till sunset. We have collins equipment in the studios also and our studios are located in the building with the transmitter. We are sold on collins equipment as you may gather. We have a nice size building located only a short distance from town, which makes it nice for the people that will work at our station.

The city of Ozark is located in the southeast part of Alabama, and is located about 40 miles from both the Florida and Georgia lines. So we hope to cover part of both states.

I wish to thank you for your nice letter and the best of luck to you.

Yours truly,

Ned Butler
