

Radio Station WQOV

VALDOSTA, GEORGIA

February 10, 1941

Kermit Geary
R. F. D. #2
Walnutport, Penn.

Dear Mr. Geary:

We take pleasure in verifying your report on reception of our signals, during our recent frequency check program, of February 6. Your report checks perfectly with our logs.

I was somewhat surprised upon hearing that we were putting such an excellent signal toward Penn. We received many reports from the north and north east, but none of them gave us such a nice report. However, you are using an excellent receiver, and you probably have an ideal receiving location. There is also a possibility that you were in the path of strong sky wave.

Perhaps you would like to know what kind of set-up we have down here. It is a complete RCA installation, put in only about six months ago. The transmitter is an RCA 250-K, the console is an RCA 76-B1, and the modulation and frequency monitors are RCA's. The tower is a 306 foot self-supporting vertical.

Wishing you the best of DX, and thanking you again for the fine report, I remain

Sincerely Yours,

George Fariss
