MR. KERMIT GEARY  
R. F. D. #2,  
WALNUTPORT, PA.

1, MAR. 53.

Dear Sir:

We are happy to confirm your reception of our station during our frequency check broadcast on 22, Feb., 1953., and thank you for the exceptionally nice report.

WJAZ uses a Gates 250 C-1 Transmitter, with two type 810 triodes as power amplifiers and two more 810's as plate (high level) modulators. The antenna consists of a single (non directional) "windcharger" tower, 230 feet high, with the ground elevation here being 205 feet above sea level. The ground is part red clay and part sandy loam with a conductivity of  $4 \times 10^{-14}$  e.m.u.

The terrain around Albany consists largely of rolling foothills, with farming, cattle raising, pecans, lumber milling and naval stores being principal occupations and products of the area. Albany itself is a rapidly growing modern city of approximately 33,000 and has two other radio stations. WJAZ has its application on file for a T-V construction permit, however this is being contested by another station applying for the same channel.

Your report appreciated and much continued pleasure and success to you in your D-X'ing.

Yours Sincerely  
James W. McGehee  
Ch. Eng.  
WJAZ Albany, Ga.
