

WMOG

AFFILIATED-MUTUAL BROADCASTING SYSTEM

COASTAL BROADCASTING COMPANY

ON CAUSEWAY TO GEORGIA'S GOLDEN ISLES

Brunswick, Ga.

August 2, 1946

Mr. Hermit Geary
R.F.D. # 2,
Walnutport, Penn.

Dear Broadcast Listener:

Your letter reporting reception of signals from WMOG, on July 16, 1946, has been checked and filed. It was found that your reception was authentic and therefore we are confirming same.

For your information, we receive signal reports from up your way quite often under normal conditions. This is most probably due to our antenna and ground system, not to mention our rather high broadcast frequency. Our equipment consists of a 1940, R.C.A Model 250K transmitter. R.C.A Consolette, Frequency Monitor and all Audio Equipment. We have a Lingo vertical tower of 165 feet ($\frac{1}{4}$ wave). Our ground system is buried under salt water.

Should you be interested in other broadcast listener addresses, here are a few who have reported reception.
F.L.VanVoorhees-33-06 165 St. Flushing, NY. Mbr. Nat Rdo Club.
Arnold E. Gerrard-Newark News Radio Club
134 South 6th St. Miamisburg, Ohio.
Ralph M. Johanns-364 Elm St. Buffalo 3, NY. Mbr. Nat. Rdo Club.
John T. Tweedie-Box 103- Oakhurst New Jersey.
K.F.Borden-Box 804-Ponca City, Okla.
Clarence Burnham-6 Avon Court-Gloucester Mass.
Plus one (double checked and confirmed) from Manila in the Phillipine Islands, during regular broadcast day.
We check frequency with R.C.A. Lab. between 3-3:30 AM the last Thursday in each month. Listen in.

Thanks for the letter and more good luck on your QSL's from other stations OM.

E. J. Powell
