CHATTANOOGA,  
TENN.  
ROSSVILLE,  
GA.

Dear Mr. Geary,

Thank you for your letter of November 11 concerning the reception of WRIP at Walnutport, Pa. It is a wonderful feeling to know that we can be heard that far away.

In accordance with our station log the information you have is correct. The power output here is 500 watts with an directional antenna system beam Northeast by southwest.

We have these test programs once each month. They held on the second Friday of each month. The purpose of these are for frequency measurements.

Again, we thank you for your very nice letter and the best of luck in your radio DX.
