Dear Radio Friend,

It was with great pleasure that we received your letter of May 4, 1957 reporting your reception of our new station W RAM. We have located your location "OTH" and were well pleased that we pushed a S-9 signal to your area. After much sweat and long tiring hours of labor it is indeed gratifying to know that we must be at least close to being "on the beam." We appreciate the fact that you took time out to send us those kind words of congratulations and best wishes.

Sounds to me like your receiving station is in top notch receiving condition. I have a Hallicrafters SX25 at home somewhat modified with Q Multiplier. Also run a OX100 on amateur bands with call W9SYF. Have never worked your fine state however. Also run 10 meter mobile in my car. The transmitter here at transmitting building is Collins 20V2 - 1KW hooked onto a two element antenna system 152 foot in height fed 120° out of phase favoring south, southwest and southeast. Your receiving point is to our weak radiation side. We have received many

good reports locally in Illinois, Iowa and Missouri.
You are however our "DX" by far.

I hereby confirm your copy of our log of Friday
morning May 3, 1957, 1:22 to 1:30 A.M. CST. It is 100%
correct.

If you are ever in our area please feel free
to stop and look over our installation.

Sincerely,
Fred Hoy
Chief engineer
