

RADIO STATION WASK

WALLACE BUILDING
LAFAYETTE, INDIANA

March 31, 1942

Kermit Geary
R F D #2,
Walnutport, Penna.

Dear Sir:

Your verification of WASK's test program is correct, of March 25th. We are operating on 250 watts from 6:00AM to 11:00PM. although we are awarded twenty-four hours. And the reason for our test programs happens that we are operating on an obsolete monitor until our new one arrives which may not be for a week or two.

New Orleans does come in but we really have very little test complaints and of course during the day and evening there is no WNOE. They are also 250 . We do think that we are putting out a grand signal. Our transmitter is located on the banks of the Wabash River on four acres and the river ever so often decides to overflow about 16feet and then we have lots of fun. It can't hurt the instrument but sure puts a stop to some of our ground work, as we had to bury 120 lines and had to do it in three and four feet of water with a team of horse to plow and hip boots and a boat. Now that they are all buried we are able to get rid of the horses and sell the boat. This overflow only happens in the spring. We are in between LaFayette and West LaFayette which is the home of the Purdue University. They have a station (daytime) noncommercial of 5000.watts.

Thanks for the interest and the good wishes we can use them like all new radio stations.

Very truly yours,

WASK RADIO STATION
