March 19, 1997

Kermit Geary
1266 Riverview Drive
Walnutport, PA 18088

Dear Kermit:

This is a letter of verification of reception of radio station KATZ AM 1600, St. Louis, Missouri on February 3, 1997 between 1:00am and 1:15am CST by you in Walnutport, PA. The programming material you described was concurrent with the DX test we had on the air during that time period. Congratulations on hearing our signal and thank you for listening.

KATZ is one of three stations owned and operated by Jacor Broadcasting of St. Louis. Jacor now owns more than 100 radio stations in the US. Our other two stations in St. Louis are FM stations at 107.7 and 100.3 MHz. All three stations are programmed for the Black audience in St. Louis.

KATZ operates non-directional during daylight hours and directional at night with 5,000 watts for both. The transmitter is a Harris MW5 and is located in Illinois near the intersection of Interstate 70 and Illinois Highway 203 just across the Mississippi River from St. Louis. The directional antenna consists of eight 150' towers and the main lobe is towards the southwest. During this special DX test KATZ operated with its non-directional day pattern.

All three of our stations play our programming from Audioarts CD-10 players and ENCO DADpro computers. The DADpro system is what was playing during this test. The audio was loaded into the hard drive system earlier in the day and played back at 1:00am. The DADpro system is networked together so we can share commercials and sound bites between stations.

Good luck with your future DXing and thanks for the report.

Sincerely,

Daryl McQuinn
