Dear Kermit;

Yes, you have recieved 1120 WHTT AM from Buffalo. I am sorry to inform you that I don't know the eminated power of WHTT-AM due to the fact that I work there as a log keeper , etc. but my educated guess is somewhere in the vacinity of 30 K Watts. I imagine you are on a high elevation.in relation to Buffalo.Although the transmitter is on an escarpment equal to the height of Niagara Falls in relation to Buffalo, you are probably higher than the transmitter (mean sea level).

WHTT is a top 40 type radio station with a nice slice of the Buffalo radio market. The station boasts morning drive time DJ Sandy Beach, formerly with WKBW- AM which now is WWKB 1520. I'm sure you must get 1520. WHTT is simulcast on FM stereo & AM mono.

I wish I could give you more detailed info for your collection but the station itself just gave your letter to our engineering group because I guess that they are too busy with production and what not. thanks for the letter. I'm writing this on Christmas Day from my girlfriend's workplace and I hope this holiday season finds you happy and healthy.

Sincerely,

E. Michael Brydalski
