April 14, 1975

Mr. Kermit Geary
R.D. 2, Box 298
Walnutport, Pa/ 18088

Dear Kermit,

Thank you for your excellent report of reception of radio station WPUT during our recent test broadcast. We are most pleased to verify your reception of WPUT, 1510 kilohertz, on Monday morning February 10, 1975 between 2:00am and 2:29am, 2:41am and 2:48am, and 2:56am and 3:01am E.S.T.. During these periods WPUT was using its regular daytime power of 895 watts. We are also happy to confirm your reception of WPUT this same morning between 2:33am and 2:41am, during which time we were operating with 50 watts. This special power has been authorized by the Federal Communications Commission for a maximum of one hour ~~was between 6am and sunrise~~, due to the enactment of daylight time during months when standard time is normally observed. We are also very pleased to verify your truly remarkable reception of WPUT between 2:48am and 2:56am this same morning, when WPUT was employing its regular pre-sunrise power of 4.2 watts. We have a single tower, 140 feet high, located right outside our studio and office building, about 3/4 mile north of the downtown area of the village of Brewster, New York. We have heard from a total of 72 DXers as a result of this special broadcast, the most distant being in Lincoln, Nebraska. Quite a successful test!

Thanks again for your report, which was a delight to receive! Sorry for the delay in answering.

Best of DX,

Chris Lucas
