25 January 1980

Kermit Geary
RD 4, Bcx 321
Walnutport, PA 18088

Dear Kermit,

I wish to thank you for your correspondence dated 10 January 1980, and to express my apologies for taking so long to reply. To put it simply, we here at WSKE are extremely busy in preparing for our birthday celebration coming up on 15 March... and things are just piling up on all sides.

Please accept this letter as confirmation of your reception of WSKE from 501PM to 515PM EST on 9 January 1980. Your log of WSKE's performance was accurate with one small exception:

WSKE is located "just south of Everett off Route 26."

It is easily understood that you thought you may have heard "Route 126" as interference from WHN is to be expected in your area... and it's also amusing, because Route 126 is found on the outskirts of Breezewood, just 8 miles to the east of Everett.

WSKE is equipped with a Wilkinson solid-state transmitter which is designed with two power settings:

1000 watts for normal daytime operation...
and 250 watts for pre-sunrise operation.

WSKE has been in operation since 15 March 1963, and was granted authority by the FCC to increase to 1000 watts using a two-tower directional array on 31 July 1979. With this power increase came the need for more space, mainly to accommodate the phasing equipment necessary for our directional signal. So, we moved approximately 100 feet to the north of our old building and put up a new modular unit designed by the WSKE management.

If you have any further questions for us, please feel free to write to me personally. Thanks again for your interest.
