Dear Kermit;

I am not sure whether or not I had answered your request for verification of reception. If not this is it. In checking program logs for Nov. 5, 1961 I find that the programming for the periods of time indicated are correct.

We are using a Collins 20V2 transmitter at 1000 Watts into a directive array consisting of two two-hundred foot towers fed 60 degrees out of phase. The frequency is 1300 kcs.

I am inclosing a copy of our area coverage map and hope that this letter will suffice for verification. Should you ever be up this way stop in and give the place a look-see.

Very truly yours,

*Paul Wensko*
