Mr. Kermit Geary  
R.F.D. # 2  
Walnutport, Pa.

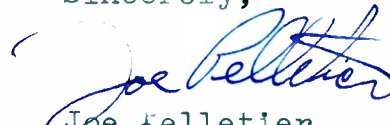

Dear Kermit,

This will verify your reception of WVAM, 1430 kilocycles, 1000 watts during our special test program on October 16, 1948. We operate with directional antennas both day and night protecting both Newark and Indianapolis. The power in your direction is quite a bit less than 1 KW.

Our equipment is mostly Gates and we have 3 antennas 365 ft high which are about a  $\frac{1}{4}$  mile from the transmitter and studios.

Many thanks for your very complete reports. Maybe we DXers wouldn't have so much trouble getting answers if all were as complete as yours. Best of DX for the coming season.

Sincerely,

  
Joe Pelletier  
Engineer
