DEERFIELD, VA.

Mr. Kermit Geary
Walnutport, Pennsylvania

Dear Mr. Geary:

We surely do want to thank you for the very wonderful letter which you wrote regarding your reception of the signal from WABH, in Deerfield, Virginia. It was most complete, and proved that you did receive us very well.

It was great to learn that you had as much as 10 microvolts of signal from us. The fact that fading was negligible was gratifying, also. Another fact which has been giving us a great deal of satisfaction, is that the other, more powerful stations do not cut us out. We had a report from near Boston which said that we were heard over WCOP with 5,000 watts of power. We are only 1,000 watts.

It was interesting to me that you were using a National HRO 1935 model and it was still so very quiet, and the fact that you had a deep well for a ground system.

The portion of the program which you logged and sent us surely serves to verify the fact that you were getting good reception. We had several to tell us about the selection "AbdullahBulbul Ameer", which we did not intend to play. As you may have noted, we are playing gospel and better type of country and hillbilly music.

This was a good February 24th morning because we are still answering letters received after that broadcast day.

Thanks again. Tune in again, and if you ever come down Route 11, leave the route at Staunton, and come by R 250 to R 629 and thus to Deerfield and look us up, if you care to do so.

Cordially yours,

Joseph L. McFarland

Joseph L. Mc Farland
Engineer for WABH
