

WPMH AM 1070

Nov 26, 1981

Dear Kermit,

This is to confirm your reception of WPMH on Nov 16th at 4:56 P.M. It would be interesting to note if you are able to receive WPMH after we've repaired our antenna system that was damaged due to vandalism. We have been operating with parameters at variance for several months now. Our new pattern puts excessive radiation in the northern direction. The 90 true north radial should be about 7 mV/m but is 44 mV/m. We are in the process of determining the cause of phase & power shifts in our pattern. Hopefully, we'll be back to normal by Jan 1, 1982.

Sincerely,

John Kruger
Chief Engineer
