Kermit Geary
DX Listening Post
1266 Riverview Drive
Walnutport, PA 18088

Dear Mr. Geary:

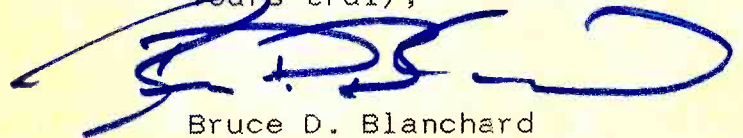

We were delighted to hear from you regarding your reception of your signal in Walnutport, PA. As you reported and we verify the ID and selections you listed are correct.

WSCL has the power output of 27,000 watts ERP (Effective Radiated Power) at 600 ft HAAT (Height Above Average Terrain).

During this time of year we have a number of distant listeners, our furthest so far was a person in Wisconsin, although Provincetown, MA, downstate New York and central New Jersey have also reported reception. Often times when distant listeners are tuning in, local listeners are having problems with their reception. I guess we could call it an even swap.

I have enclosed one of our program guides and a bumper sticker for your collection. Thank you for your letter.

Yours truly,

Bruce D. Blanchard
Director of Engineering
