Mr. Kermit Geary  
1266 Riverview Dr.  
Walnutport, PA 18088

Dear Mr. Geary:

May I take this opportunity to say it is always a pleasure to hear from a DX'er, especially one located so far from one of our stations. We have had reports from people all over the country picking up at least one of our eight stations from time to time; but, of course, channel 2 receives the most.

This is to confirm that your report does indeed check out with our program log, and you did evidently receive channel 2 at the times indicated. Channel 2 transmits at 100 kW visual power on a 1000 foot tower, 1769 feet overall height above sea level, and utilizes a General Electric batwing antenna.

Thanks for your correspondence.

Sincerely,

A handwritten signature in cursive script that reads 'Gary M. Smith'.

Gary M. Smith  
Director of Engineering
