Dear Wayne,

Judging by your letterhead and number of DX confirmations you are a serious DX'er. If you have 1300 stations you may have already heard this station under the old calls KPMC. However you are located in line with a deep null in the signal pattern so KNZR is probably very marginal in your area. One factor aiding your hearing KNZR at this time may be our new Harris DX-10 transmitter which is capable of very high but legal modulation.

Sorry no bumper stickers but enclosed is a "mike flag" sticker. Also the copy of a coverage map shows our predictable night-time skywave coverage.

Sincerely
