Dear Wayne,

Thank you very much for your very fine reception report. Your data are correct.

At that time we were putting 5 KW up a 5/8 wave tower (400'). Our transmitter is a Harris BC5H and the tower is a solid steel Pirod.

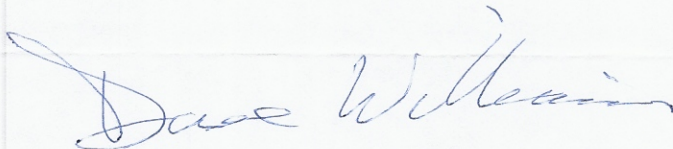

We are trying to improve our engineering as we are somewhat disadvantaged with a 7:30 A. M. sign-on in January and 500 watt morning and afternoon critical hours.

There will be major changes in our facilities soon we trust.

We might come in stronger up your way. Please watch the trade journals for details as they develop at KLLV.

Again, thank you for your interest in KLLV and Best Wishes for the NEW YEAR!

Sincerely,

Dave Williams
